

Waste and Water Tank Ordering Instructions

Please note that all tanks are built to order and typical lead time is approximately 3 weeks.

WT TANKS

Waste and water tanks that begin with a WT come fitted with the fittings shown in the diagram so unless additional fittings are required the steps below are not necessary.

OLT TANKS

Before you order your waste/water tank make sure you have completed the following items:

- Make note of the number of the OLT tank that meets your needs.
- Copy and paste the schematic of the tank you have chosen to a blank sheet of paper. Feel free to call us or email us and we will email you a blank schematic.
- Use the schematic to mark where you want each fitting installed.
- Select the proper fittings or dip tubes from our web store, based on what is on your drawing, and add them to your shopping cart.
- Check the shopping cart and make sure that all items are accounted for and billing and shipping information is correct.
- Fax or email us a copy of your diagram so that we can build the tank to your specifications.

FOLLOWING THESE STEPS IS VERY IMPORTANT BECAUSE ALL TANKS ARE BUILT TO ORDER

THERE ARE NO RETURNS ON TANKS

How to mark the Drawing

- Download and print the tank diagram.
- Use solid lines for visible fittings and use dotted lines for “blind side” fittings.

Identify each fitting – by size, (.5" or 1.5" etc.), function, (inlet, diptube, suction or vent.) and location (visible or blindside on the drawing, not after the tank is installed)

Use the example below for a reference. Show each fitting on at least two views on the drawing.
